

BÄLTESPECIALISTEN **TRYGGER-MOBIL** **CE**

TRYGGER-MOBIL is the latest product development in the belt system **TRYGGER**. It was developed to ensure patient and staff safety during patient transfer/transport. Using this method the transfer is controlled and safe and the risk of patient damages is minimized. The safety of the staff is also guaranteed when moving aggressive patients.

The design of the leg straps will allow the patient to walk with the belt on, even go up steps if necessary. By rotating the waist strap, the hands can be strapped back or front, depending on the reason why the patient is restrained/transferred.

TRYGGER-MOBIL is registered with the Swedish Medical Products Agency as a medical device, grade 1, and has the required **CE** marking.

For an overview of the range of uses of **TRYGGER-MOBIL**, see images below:
